Hiring Manager
[COMPANY NAME]

Dear Hiring Manager,

I'm writing to apply for the [JOB TITLE] role at [COMPANY NAME]. I hold an MSc (Honors, Red Diploma) in Web Technologies from ITMO University and a BSc in Information Technology from Tartous University, and I specialize in applying machine learning to practical, deployable web and mobile products.

For my Master's thesis, I designed and built a full-stack multilingual (English, Arabic, Russian) sentiment analysis system that runs entirely in the browser — fine-tuning a DistilBERT model, converting it to ONNX with INT8 quantization for a 75% size reduction, and implementing multi-threaded in-browser inference with automatic WebGPU/WASM fallback. The result was a 94.91ms average latency and 0.72 F1-macro score, and the work has since been formally adopted in production via a signed Act of Implementation.

Alongside this AI/ML focus, my background spans full-stack and mobile development — Python, JavaScript/TypeScript, React, React Native, and Flutter — giving me a practical foundation for taking ML features from research prototype to shipped product.

I'd welcome the opportunity to discuss how this background could contribute to [COMPANY NAME]'s work. Thank you for your time and consideration.

Sincerely,

Aya Yousef
